

Free / Released position

Carbiner clipped to line, allows a meter of slack so jacks allow boom to fall and sail to fill.

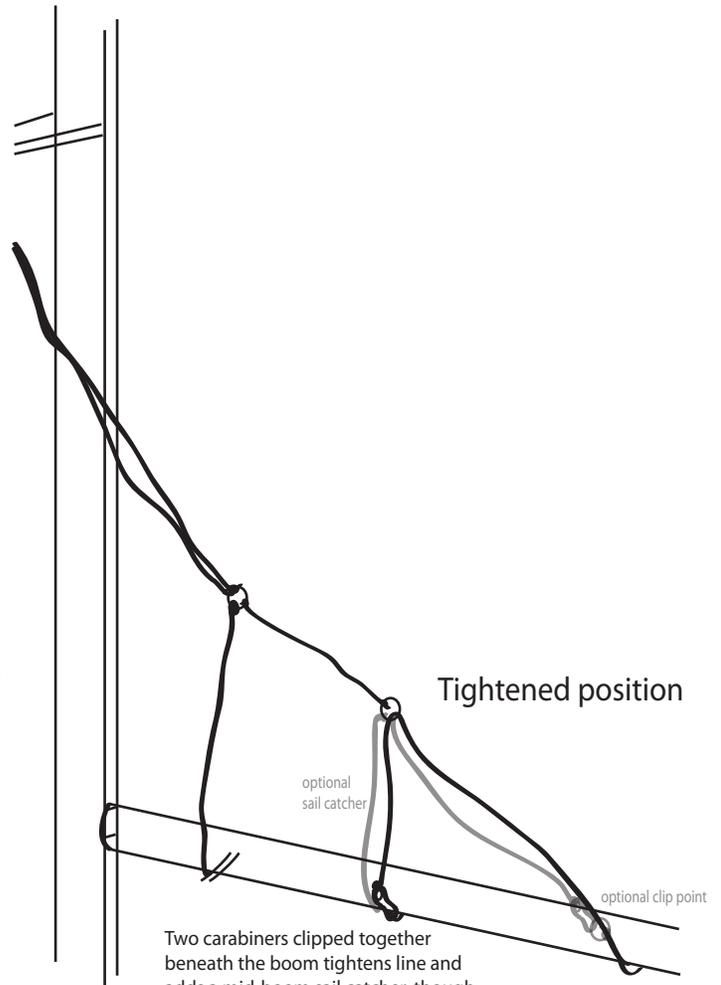

Clipped/Tightened

Free / Released position

Carbiner larger than ring diameter, slackened to loosen whole system.

Tightened position

Two carabiners clipped together beneath the boom tightens line and adds a mid-boom sail catcher, though may be too tight around the sail. If it's too tight, add loose loop below boom to catch sail and clip to optional points instead.
